

CSS IN DEPTH

Agenda

1

CSS Border

2

CSS Box Model

3

CSS Project

CSS Border

CSS Border

- Helps in setting up the border for HTML elements
- There are 4 properties that can help in setting up of border:
 - Width - sets the width of the border
 - Style - sets the style of border; Eg: solid, dashed etc.
 - Color - sets the color of the border
 - Radius - determines the roundness of the border
- You can set the border for specifically top, right, bottom and left
- We can also club top and bottom together and same goes for left and right
 - Eg: border-width: 2px 5px; sets top and bottom 2px; left and right 5px
- Border can also be set in a single line
 - Eg: border : 2px solid blue;

CSS Box Model

CSS Box Model

- Every element in CSS can be represented using BOX model
- It helps developer to develop and manipulate the elements
- It consist of 4 edges
 - Content edge - It comprises of the actual content
 - Padding edge - It lies in between content and border edge
 - Border edge - Padding is followed by the border edge
 - Margin edge - It is outside border and controls margin of the element
- Example:

```
#styled{  
    border: 2px solid blue;  
    margin: 5px;  
    padding: 20px;  
    content: 50px; }
```
